

## **TASK INSTRUCTIONS**

### **DATA SPECIALIST**

*To be submitted by:* 12pm BST / 1pm CEST on Wednesday 30<sup>th</sup> July 2025

---

*Return to:* andy.korczak@goldstandard.org

---

### **Task Assignment**

1. Using <https://registry.goldstandard.org/> please create a one-page data visualisation. It can be a dashboard, a few charts, or an infographic. It should concisely and clearly show the data available. It does not need to present all the data: it can be just a few records as opposed to all the rows, and you can pick only the most significant attributes. Clarity of presentation matters much more than squeezing as much data as possible on one page. You can use the exports or scrape the data.

2. Provide a brief analysis of the data available on <https://registry.goldstandard.org/> and <https://assurance-platform.goldstandard.org/>. Identify issues with the data model and data presentation. Propose an approach to addressing the issues - meaning not necessarily specific suggestions on how to change the data model but rather explain how would you go about the work of identifying and making your proposed changes.

## **Instructions**

You can use any tools you are comfortable with, if you can share the results easily - ideally including any intermediate files so the work can be reviewed. If you use specific proprietary software, we may not be able to open the intermediate files (GS mostly uses Microsoft tools), but ultimately the result will matter the most.

Feel free to send questions about these tasks before you start. We don't put a hard time limit on these tasks, but hope you do not spend more than a few hours.

3. Free task: you can share any of your previous work that you feel is similar or demonstrates skills relevant to the above two tasks
